

Safety advice

Year 2, unit 3: Mixing things together

Lesson 5: recycled paper seed sachets

This activity is best done in an outdoor area so sun-safety policies need to be followed.

A power cord needs to be run safely to a table to allow for the use of an electric mixer or blender. Refer to your school Workplace, Health and Safety policy and seek advice regarding the safe set up of power cords especially for outdoor learning.

Cords must be located well away from where students are using water and from where water could be spilled.

The electric mixer and power supply is to be operated by teacher or responsible adult and is not to be left unattended by this adult. Explicit instructions about not placing hands near the mixer must be stated with each new group of students observing the mixing.
